

Business Requirements Document — Sales Performance & Forecasting

1. Business Context

The sales organization lacks a unified, near-real-time view of revenue, profit, and forecast across regions, channels, and product categories. Stakeholders rely on disparate Excel exports, leading to inconsistent KPIs and slow decisions.

2. Objectives

- Deliver a single KPI reporting solution covering 100K+ transactions.
- Provide drill-down from company → region → channel → category → SKU.
- Embed a 6-month forecast view to support strategic planning.

3. Stakeholders

Role	Interest	Engagement
VP Sales	Headline KPIs, forecast	Sponsor
Regional Managers	Region/channel performance	Daily users
FP&A	Margin, discount impact	Approver
Sales Ops	Data quality, KPI defs	Co-builder

4. Scope

In-scope: Sales transactions 2022–2025, Power BI dashboard, Excel back-up, SQL KPI library.
Out-of-scope: CRM pipeline, commission calculation, ERP write-back.

5. Success Metrics

- Single source of truth for 100% of executive sales KPIs.
- Report load < 5s for any slicer combo.
- Forecast MAPE $\leq 12\%$ on the holdout quarter.
- 80% adoption among regional managers within 60 days.

6. Assumptions & Risks

Assumes daily ETL refresh and clean dimensional master data. Risk: discount field inconsistencies across channels — mitigated with Sales Ops data-quality checks.
